Forecast-based comparison

The same 195 minutes of work fit a plan averaging 4.246°C lower forecast apparent temperature. All task windows, locks and breaks are preserved. This is a forecast comparison, not a measured health improvement.

Work: 195 minutes. Original mean: 32.7°C. Proposed mean: 28.4°C. At or above 32°C: 15 minutes.

Task	Time	Duration	Locked
Grounds cleanup	08:00–09:00	60 min	No
Garden maintenance	09:00–10:00	60 min	No
Fixed contractor inspection	10:00–10:30	30 min	Yes
Pathway sweeping	10:30–11:15	45 min	No

Protected breaks: 12:30–13:00.

Constraints checked

- PASS: All 4 jobs and 195 work minutes preserved
- PASS: One crew; no overlapping jobs
- PASS: Every job stays inside the paid shift and its allowed window
- PASS: Every locked start and protected break preserved
- PASS: Forecast matches the selected date and location

Weather data: Open-Meteo.com and its contributing national weather services, CC BY 4.0.

Forecast values describe a weather-model grid, not a sensor at this work site. Each hourly forecast value is held constant within its four 15-minute planning slots. Apparent temperature is a planning input, not an occupational heat-safety certification.

Apparent temperature and comparisons are forecast estimates. They are not measured worker exposure, health improvements or a safety guarantee. The threshold is a user-defined planning indicator. Human supervision and applicable workplace rules remain necessary.

Illustrative scenario unless replaced with your own operating inputs. Acceptance is stored in this browser only.
